Pre-Engineered Tensile Structures For Industrial Applications

Advantages...

Completely Relocatable

UFS Industrial Fabric Structures are easily dismantled and transportable making them viable solutions for resale or reuse for the same or alternative applications.

Rapid Installation

UFS prefabricated modular frame and fabric systems are designed for rapid, low cost installation.

Pre-Engineered Structural Frame

The UFS pre-engineered structural framing system with various profile shapes and sizes is engineered to site specific conditions and provides the best corrosion protection system available.

Foundation Systems

The lightweight properties of UFS Industrial Fabric Structures result in minimal foundation requirements - typically earth anchor or pier footing systems.

Long-Lasting Fire Rated Fabrics

UFS Industrial Fabric Structures utilise high strength, fire retardant fabrics from proven suppliers with lifespans of 10-40 years, supported by manufacturers warranties.

Efficient Space Utilisation

UFS structural frames are designed to provide large, clear span spaces for the most efficient space utilisation.

Translucent Membranes

Translucent fabric cladding provides a natural ambience and well-lit, energy efficient, interior environment that results in reduced daytime operating costs.

Internal Environmental Control

The fabric cladding of a fully enclosed UFS Industrial Fabric Structure is continuously sealed to provide a weather-tight shell. Structures can be effectively insulated, heated, negatively pressurised, or air conditioned as required.

Structural Longevity

The combination of high quality, corrosion resistant structural frames and high strength, coated membranes ensure maximum structural longevity.

Hard Walling Systems

Lightweight hard walling systems such as Colorbond Steel and Bondor Panels, or pre-cast concrete can be incorporated for added security.

Accessory Options

Accessory options include specialty fabrics, personnel, vehicle access and hangar doors, weather curtains, ventilation systems, windows, electrical, indirect or direct lighting systems, HVAC, fire safety and conveyor systems.

Applications...

Multi-purpose Industrial Facilities

Aviation Hangars

Environmental Enclosures

Mining Camps

Rapid Deployment Fleet Covers

Environmental

- Remediation Enclosures
- Composting, Aeration and Biofilter Compatible Buildings
- Waste Management
- Treatment Plants

Industrial

- Warehousing
- Manufacturing
- Workshops

Mining

- Heavy Equipment Covers
- Stockpiling
- Relocatable Camps
- Mineral Resources
- Storage
- Site Shutdowns

Agriculture

- Stock Yards
- Crop Covers

Aviation

- Aircraft Hangars
- Maintenance Facilities

Military

- Aircraft Facilities
- Relocatable Fleet Covers
- DOD Sites
- Chemical Clean Up
- Decommissioning and Processing Facilities

Construction

- Excavation Covers
- Site Operation Facilities
- Storage Facilities

Universal Fabric Structures specialises in the design, manufacture, and installation of quality pre-engineered fabric covers for mining, remediation, waste management, aviation, and other industrial applications. With extensive experience in both overseas and domestic markets, the UFS team provides unsurpassed technical, construction, and project management expertise.
